

**F. F. Author-First, U. U. Author-Second** (Moscow), **Z. Z. Third-Author** (Cambridge, MA, USA)

How to prepare a talk abstract

The abstracts of talks must be submitted in  $\text{\LaTeX}$  format, if it is impossible then in  $\text{\PLAIN T\TeX}$  or Microsoft Word format. In the last two cases, the text will be manually processed and its final appearance may differ from that which was intended by the authors.

The size of the abstract must not exceed two pages.

The `Kurosh2018` style file includes links to the standard packages `amssymb`, `amsmath`, `latexsym`, `graphicx`, `xy`. Please try to fulfill the following conditions if possible.

Do not use nonstandard packages, do not define nonstandard commands using `\newcommand`, `\renewcommand`, `\def`, etc.

Do not use automatic numbering of statements, equations, and bibliographic references. To number the equations, use the command `\eqno`. It is not advisable to use footnotes.

The text of the abstract may contain statements that should be formatted as follows:

**Theorem 1.** Fulfillment of the above conditions will greatly facilitate the processing of your abstracts.

The first parameter is the name of the statement, the second is the statement text.

For drawing diagrams, it is recommended to use the package `XY-pic` [3]:

$$\begin{array}{ccc} A & \xrightarrow{f} & B \\ g \downarrow & & \downarrow g' \\ D & \xrightarrow{f'} & C \end{array}$$

If this is absolutely necessary, include drawings in the JPG or PDF format with the command `\includegraphics`:
